9 Writing

Explain the difference between each set of terms:

1.Debugger / **Interpreter** :
A debugger is used for finding and correcting errors in code. An **interpreter** is used for **translating code written in different programming languages**.

2. **Programming language** / Text editor :
A **programming language** is used for **writing code that a computer can interpret and execute**. A text editor is used to enter lines of code and create programs.
