9 Writing

Hi Grant,

The development of our new program is right on schedule. We have **3** engineers working on the project. According to the schedule, we have **10** days left to complete **fifteen hundred** lines of code. If each engineer completes **fifty** lines per day, we can complete the project on time. Here are my calculations: **3 engineers times 50 lines per day equal 150 lines per day. 1500 lines divided by ten days also equals 150**.

Let me know if you have any questions.
Susan
